

Area-proportional membership of the 39 °C-derived up arm and two curated lenses

Corroborates the membership answer: 198 of 213 WT_heat_up genes are in neither curated lens.
Circle areas are fitted to those counts (eulerr stress 6e-19), so geometry is evidence here.

Bold numbers sit inside the region they count; each callout names an overlap and its leader line points at it. Open diamonds mark the two intersections that exist and are EMPTY. Set membership only: a lens enriching is a separate measurement from that lens being contained in WT_heat_up.
