

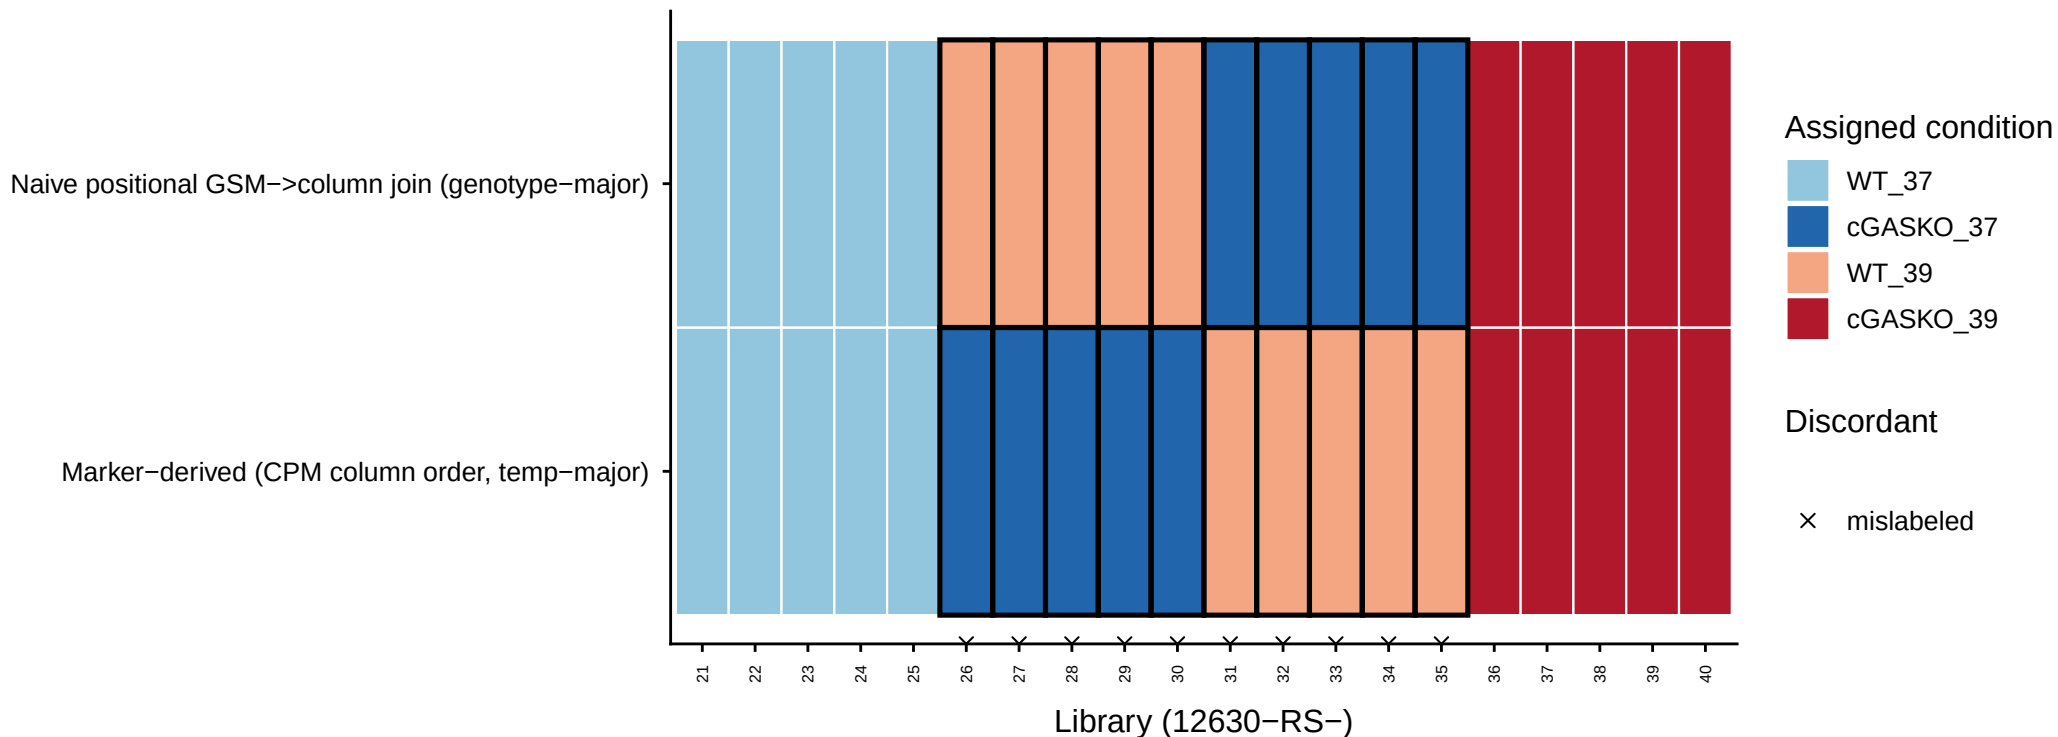

Fig 1d -- Scramble exhibit: positional GSM join mislabels libraries 026–035

10/20 libraries discordant (black outline). CPM columns are temperature-major; GSM accessions are

PROVISIONAL – inferred sample mapping (Hspa1b/Hsph1 thermometer + Cgas), pending collaborator sample sheet
 The deposited CPM column order is temperature-major (proven by the thermometer: 031–040 hot); the GEO GSM accessions are genotype-major.
 A positional GSM->column join therefore mislabels the middle block (026–035): KO-37 columns get stamped WT-39 and vice versa.
