

Hypergeometric result for every proteostasis probe term in WT_heat_up

15 of the 19 distinct probe terms entered the hypergeometric. The 4 that did not are marked with their reason, which is a property of the term's size in the 12986-symbol background or of its gene content, and carries no information about the arm. Two terms clear the adjusted-p cutoff, and the right panel names the arm genes carrying each of them. The dashed rule is a raw p of 0.05. Probe list and name sweep are both configured.

Hypergeometric p for each probe

Arm genes in the term

- no arm gene in term (10 genes in the universe)
- below min gs size (9 genes in the universe)
- no arm gene in term (32 genes in the universe)
- above max gs size (575 genes in the universe)
- 3 of 14 genes: IL1A, PTGS2, TNFSF11
- 8 of 143 genes: EGR1, GATM, IGF2BP2, IL1A, KDM6B, NPR3, PTGS2, TNFSF11
- 3 of 54 genes: ANO1, HSPA1A, IL1A
- 5 of 154 genes: ATF3, CLU, CTH, HSPA1A, HSPH1
- 3 of 82 genes: ANO1, HSPA1A, IL1A
- 4 of 130 genes: ANO1, HSPA1A, IL1A, SCN9A
- 3 of 87 genes: ATF3, CTH, HSPA1A
- 4 of 135 genes: ATF3, CTH, HSPA1A, HSPH1
- 1 of 23 genes: HSPA1A
- 4 of 193 genes: CLU, HSPA1A, HSPH1, NPPC
- 4 of 254 genes: ATF3, CLU, CTH, HSPA1A
- 2 of 64 genes: HSPA1A, HSPH1
- 2 of 97 genes: CLU, HSPA1A
- 1 of 112 genes: HSPA1A
- 1 of 118 genes: CLU

● tested, adjusted p above the cutoff ● tested, adjusted p below 0.05 X never entered the test
