

GO BP term blocks for WT_heat_up, by term count and best adjusted p

The 386 enriched terms collapse to 35 blocks at Wang similarity 0.7, average linkage cut at 0.7 (GOSemSim 2.39.2). Bar length is the number of terms in the block, the bar-end count the union of genes those terms hold, out of the arm's 199. The right panel gives the share of the block's terms whose hit count a depth-matched random draw of the same size matches in under 5% of 2000 replicates.

Enriched terms per block, 35 blocks
