

TF rank under six decoupleR statistics, WT_heat contrast

Rows are key TFs, columns the six decoupleR statistics; fill = binned rank quantile and the cell label is the absolute rank. The boxed column is MLM, the one multivariate statistic; its Spearman against ULM over the full 658-TF ranking is 0.62, against 0.97-1.00 for each univariate statistic.

decoupleR statistic (rho = Spearman rank-corr vs ULM, full WT_heat ranking)
