

Shared regulon membership of Hif1a's top heat-MAIN genes

Rows are the top-20 heat-MAIN-driving genes of Hif1a's regulon, ordered by signed contribution; columns are Hif1a (orange) and its 12 largest target-sharers, ordered by heat-MAIN ULM score. A filled tile means the gene is in that TF's CollectTRI regulon. The left margin bar gives each gene's heat-MAIN t, the top margin bar each TF's heat-MAIN score, so both margins can be read against the grid.
