

Fig 3j-B. Top activated / suppressed TFs under all 6 decoupleR statistics (Interaction)

Each facet shows the top-12 up + top-12 down TFs under one statistic. Axes differ across statistics (scales='free') -- the point is RANK/IDENTITY, not absolute score. HIF axis = orange, IFN/NFkB axis = blue. Key TFs labelled. Shared network: CollecTRI (CACHED; get_collectri() disabled).
