

Fig 3q. Hif1a's targets belong to everyone

Of Hif1a's 353 analyzed CollecTRI targets, 325 (92.1%) are also regulated by ≥ 1 other TF (mean 22.2 other target). The top sharers are the network's most promiscuous regulators -- housekeeping (Sp1), stress/senescence (Trp53), NF-kB, AP-1/immediate-early, proliferation (Myc) -- none hypoxia-specific. Bars = % of the 353-targeted TF also regulates (shared count in parentheses); this is why Hif1a's heat-MAIN signal cannot be attributed to H
