

GSEA overview across 13 databases: WT heat (39 vs 37 °C)

Top 5 sets per database, ranked by pooled FDR (ties broken by raw p, then |NES|); 13 of the 13 pooled databases shown. Pooled family: 4,786 tests. Significant sets: 854 at per-database FDR < 0.05, 853 at pooled FDR (44 lost, 43 gained).

Set status when the per-database FDR is replaced by one pooled FDR (both at 0.05)

● Significant (both) ◆ Lost on pooling ▲ Gained on pooling ○ Not significant

Facet header (n/N): n of the N sets in that database pass the pooled FDR, counted over the whole database. Panel fill is the NES colour; the legend keys use a neutral fill.
