

Panel A: Composition. What named programs does WT_heat_up contain?

WT_heat_up unassigned remainder: 191 of 213 genes (89.7%) in no named lens.
Circle areas fitted to exact counts by eulerr (stress 2e-18, diagError 5e-10).

Membership partitioning of the mouse 39 °C-derived up arm (WT_heat_up, 213 genes) against three curated lenses: HSR_core (47 genes), TCR_activation (66 genes), and Lombardi2022_HIF (100 genes). Bold numbers sit inside degree-1 regions; callouts label non-empty overlaps. Set membership only: a lens enriching is a separate measurement from that lens being contained in WT_heat_up.
