

The same seven counts, drawn where geometry carries no quantity

Corroborates the membership answer: 198 of 213 WT_heat_up genes are in neither curated lens.
Fixed layout: a printed 0 marks a region that exists and is empty.

All three circles are equal and equally overlapping by convention and only the printed counts vary, so this layout cannot assert a containment the counts contradict. Set membership only: a lens enriching is a separate measurement from that lens being contained in WT_heat_up.
