

Panel B: Provenance. Where does Interaction come from?

Interaction_up shares 0 of its 9 mouse orthologs with WT_heat_up. Against all four curated lenses, 191 of 213 WT_heat_up genes (89.7%) sit in no named lens. Interaction_up = 7 human genes (9 mouse; underpowered_reported, 5-14); Interaction_down = 0 (structurally_absent). Fit: stress 5e-18, diagError 1e-09.

Membership partitioning of WT_heat_up (213 genes) against Interaction_up (7 human genes / 9 mouse orthologs, underpowered_reported), Lombardi2022_HIF (100 genes), and HSR_core (47 genes). Interaction_down (0-byte file) is structurally_absent at nominal zero. Overlap of WT_heat_up with Interaction_up is 0 genes. Set membership only: a lens enriching is a separate measurement from that lens being contained in WT_heat_up.
