

Hif1a target contribution across the ranked regulon, WT: heat (39 vs 37 °C)

All 353 Hif1a regulon members, ranked by signed contribution (sign(mor) x t_wt). Stress/ECM genes (purple) tower over the regulon; the HIF-diagnostic hypoxic core (Pdk1/Bnip3/Bnip3l/Car9, teal) is REPRESSED (-8.46 total).
Coarse 3-class provenance: 91.8% other | 10.4% shared/glycolytic | -2.2% hypoxic HIF core (fig3l decomposes 'other' finer).
