

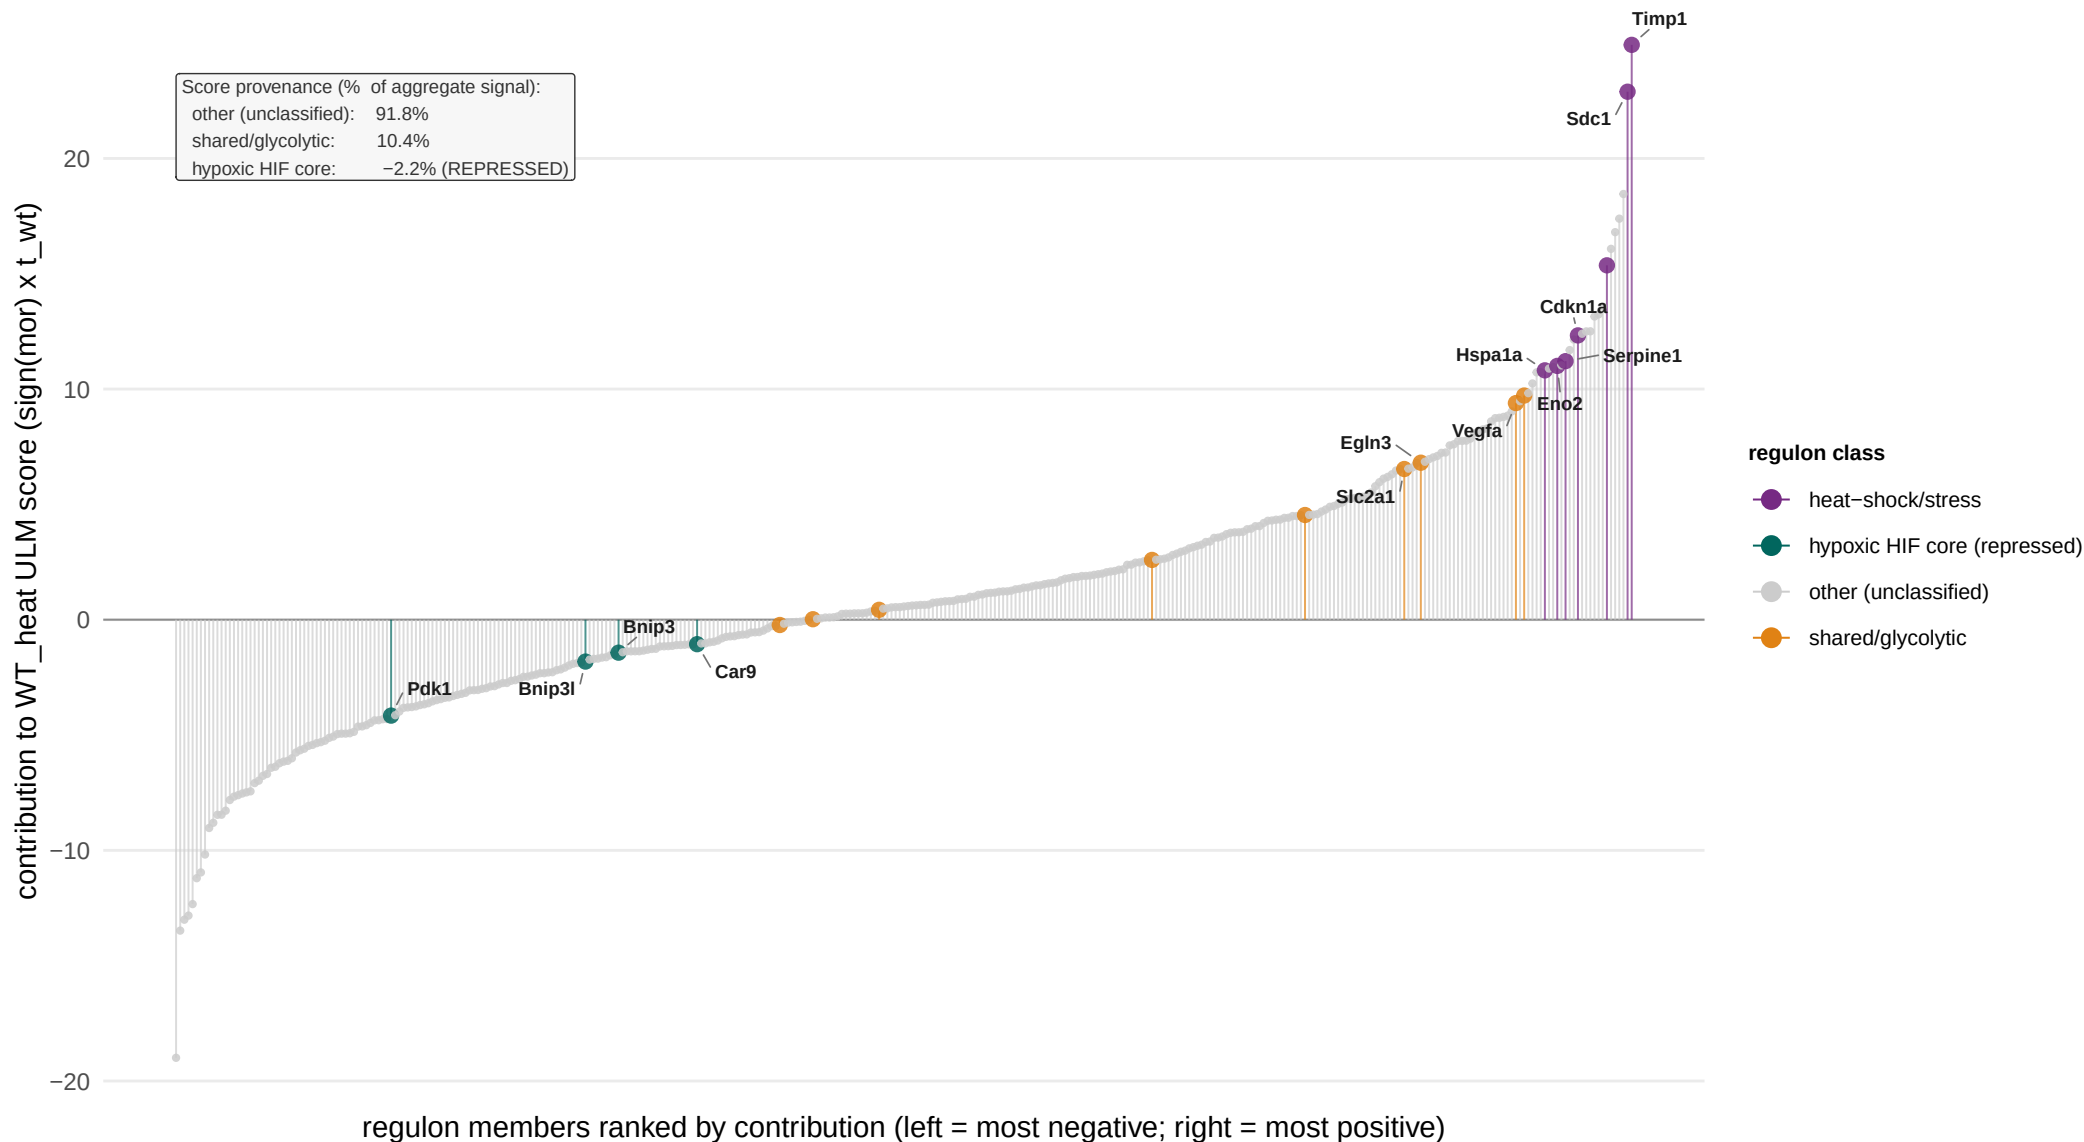

Fig 3g. WHERE Hif1a's score comes from: full ranked regulon contribution landscape (WT_heat)

All 353 Hif1a regulon members, ranked by signed contribution ($\text{sign}(\text{mor}) \times t_{\text{wt}}$). Stress/ECM genes (purple) tower over the regulon; the HIF-diagnostic hypoxic core (Pdk1/Bnip3/Bnip3l/Car9, teal) is **REPRESSED** (-8.46 total).
Coarse 3-class provenance: 91.8% other | 10.4% shared/glycolytic | -2.2% hypoxic HIF core (fig3l decomposes 'other' finer).

PROVISIONAL – inferred sample mapping (Hspa1b/Hsph1 thermometer + Cgas), pending collaborator sample sheet
