

Fig 3p. No clean winner on heat-MAIN: Hif1a is #9 in a crowd of co-

decoupleR-ULM (CollectRI, .mor='mor', minsize=5) on the Temp_main t-stat vector; 658 TFs scored. The top 10 separated by tiny gaps (Jun 6.06 down to Nfkb1 5.12), all at $p \sim 1e-7$ -- Hif1a (5.14, $p=3e-07$) sits at #9 among stress / immediate-early / NF-kB regulators, not atop a hypoxia-specific peak. Hsf1 -- the canonical heat-shock TF -- is far down at #50 (3.20, appended below the dashed break). Colored by curated TF family; this ranking crowd
